Work Experience

Flexdealer (via Toptal)

Software Engineer

[Remote], Canada

September 2018 - May 2020

- Developed an online platform for building websites, using React and Node. Intended for digital agencies to quickly create and deploy multiple websites without a help from a developer.
- Optimized application performance using memoization and immutable data structures. Continuously monitored performance with React Profiler to achieve 16ms rendering target even in large trees.
- Managed TypeScript workspace with 5 inter-connected projects. Optimized CI/CD pipeline to rebuild effected projects only. Used private npm registry to avoid duplicate builds.
- Conducted multiple technical interviews to find a suitable engineer for the project. Maintained code consistency by reviewing pull requests, creating internal style guide and refactoring problematic parts.

Lürssen (via BenDavid)

Software Engineer

[Remote], Germany

November 2019 - April 2020

- Developed a core system for managing maintenance tasks for a fleet of physical ships.
- Achieved 95% code coverage and reduced query latency from seconds to milliseconds.

Alta Software

Software Engineer

Tbilisi, Georgia

March 2017 - August 2018

- Developed a module to dynamically inject plugins in a loan processing system.
- Created a web front-end for utility payment system using Angular and GraphQL.

Google

Software Engineering Intern

Zurich, Switzerland

April 2016 - June 2016

- Worked with personal search infrastructure team developing command line tool for internal usage.
- Integrated internal storage system with a processing system to make system more flexible to the clients.
