## Skills

**Languages:** English, Georgian, Russian

**Tech Stack:** HTML, CSS, JavaScript, React,Redux,Node.js, Express, MongoDB

## Projects

**FreeCodeCamp APIs and Microservices**          **Stack:Node.js,Express,MongoDB**

- **Timestamp Microservice** *Github link*
  Route /api/timestamp/:date will return in json format unix timestamp and UTC Date or error:"Invalid Data"

- **Request Header Parser Microservice** *Github link*
  Route /api/whoami returns in json format your ip address,language and user-agent

- **URL Shortener Microservice** *Github link*
  When you post url , microservice saves it in MongoDB with unique number and you will be redericted to original url if you go to /api/shorturl/:number

- **Exercise Tracker** *Github link*
  You can create username and with the id which you will get from the mongodb, you can add more details to this user, also there is several routes for getting list of users and data based on time or limit.

- **File Metadata Microservice** *Github link*
  Simple microservice, which allows you to upload file and returns a json object that specifies a name,the type and the size. To handle file uploading i use the multer npm package.

**FreeCodeCamp Front End Libraries**          **stack: HTML, CSS, JS, React**

- **Random Quote Machine** *Github link*
  onClick generates random color and quote from API.

- **Markdown Previewer** *Github link*
  Markdown previewer using Marked.js and React

- **Drum Machine** *Github link*
  Drum Machine using React Hooks
