Motivation

My first interaction with programming was at my early age in a local training center, which gave me a solid foundation and understanding of the basics. I was gripped into solving various programming related problems. I became even more fascinated by the programming at the university, therefore I started gathering more information about branches of software development and after seeing the roadmaps I found out that I was really interested in web development. I started studying from youtube videos and then my friend told me about an online mentoring group, BitCamp that gave me necessary skills for a junior web developer and really speeded up my learning process. My current goal is to become a full stack developer and I am eager to learn new things.
